Principles:

- **Governance**: a system to ensure that the central services serve the community, not themselves or certain interest groups, to ensure that they are responsive to changing needs, etc.;
- **Sustainability**: central services will need to have sustainable resources to meet their obligations and create trust;
- **Insurance**: the central services need to be open to create confidence and allow the community to retain control.

(Bolet G, Lin J, Neylon C, 2015)

Method:

“The fundamental challenge for the implementation of OA policies is the need to develop a fully functioning OA infrastructure from the current disparate collection of services”

(Bolet Johnson and Mattia Fosci, 2016)

- OA infrastructure should be based on a web of services relying closely on each other and that can’t be considered independently of each other
- 6 categories of services that support potentially the implementation of OA policies

---

**Services catalog:**

<table>
<thead>
<tr>
<th>Category</th>
<th>Services</th>
</tr>
</thead>
</table>
| **1. UNDERPINNING SERVICES** | 1.1 HIRMEOS project: identifiers, metadatas
