2013-8 (February)

12th Asian urbanization conference

edited by Monique Abud

Urban dynamics, environment and health are three major interlinked areas in the fields of urban studies, urban geography, and urban planning, with all three strongly connected to social well-being. The interconnections of various elements of these three areas have great bearing on the life quality of people in space and time. The sequential arrangement of these three themes in this conference is an expression of priority action of the process of change in spatial, environmental and human context along with time.

Preventing China's local government debt crisis

written by Sebastien Goulard

While Eurozone countries have been severely affected by the recession and some local governments are struggling with substantial debts, we may well ask whether another debt crisis could occur in China. Several newspapers have supported this hypothesis.
